Rough Draft Conclusion Reflection: For this lab you will not be required to type the entire report. You will, however, be asked to type a reflection paper. This sheet will serve as a rough draft for your reflection. Make sure your reflection is at least three paragraphs and answers all the bullets (with detail).

Paragraph 1

- What was the purpose of completing this lab?
- What information did you use to plan your model? Use key terms from science class to explain.

Paragraph 2

- Did your model change during construction? If so, what did you change and why
 did you change it. If not, explain why no changes were needed.
- How can you relate this lab to each of Newton's Laws of Motion?
- How can you relate this lab to your basic understanding of energy? If you aren't sure do some research and/or use the article to aid in your response.

Paragraph 3

 Now that you have seen everyone's roller coaster what would you have done to make yours better? What advice would you give to an amusement park engineer?
